The invention relates to a method for in vitro cell culture which involves adding a macroscopic membrane that is formed by self-assembly of amphiphilic peptide in an aqueous solution containing monovalent metal cations to a cell culture medium comprising cells, thus forming a membrane/culture mixture, maintaining the mixture under conditions a sufficient for cell growth. The invention also relates to EAK16 peptide certical for cell growth. The invention also relates to EAK16 peptide into the macroscopic membranes are useful in biomaterial applications such as medical products (e.g., sutures), artificial skin or internal into the macroscopic membranes are useful in biomaterial applications such as medical products (e.g., sutures), artificial skin or internal lings, slow-diffusion drug delivery systems supports for in vivo use, as slow-diffusion drug delivery thicle for delivering protein-type drugs conductive biopolymer for culturing cell monolayers, for promoting cell adhesion and migration, useful as experimental models for Alzheimer's disease and scrapic infection. The present sequence is yeast zuotin DNA. This sequence is useful as the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         672
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   66 AAGCAATTGAAAGATGCAGGTTTGACTGCATACAACCATAACATCGACACTTCCAGAGAA 125

monovalent metal cations, where the peptides have alternating hydrophobic and hydrophilic anino acids and are complementary and structurally compatible, to a cell culture medium complementary and structurally compatible, to a cell culture medium comprising cells, thus forming a membrane/culture mixture, and maintaining the mixture under conditions is sufficient for cell growth. (MI) is useful for culturing a macroscopic membrane utilised in biomaterial applications e.g., slow-diffusion drug delivery systems, artificial skin or separation matrices, or as delivery systems, artificial skin or separation matrices, or as caperimental models for Alzheimer's disease and scrapic infection e.g., liver cirrhosis, kidney amyloidosis, or other protein conformational diseases. (MI) enables in vitro culturing of macroscopic membrane that is stable in aqueous solution, serum and ethanol, highly resistant to heat, alkaline and acidic ph, chemical denaturants and proteolytic diseasin, and is non-cycloxic. This sequence encodes yeast DNA binding protein contour amphiphilic peptides capable of forming membrane can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1023

These sequences can be used to produce transgenic plants which express different levels of the gene, or express it at different times in plant development. They can also be used as a target in the production of herbicides. The present sequence is a maize biotin synthase cDNA obtained from clone cholc.pk009.j14, which was derived from a maize embryo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            wew polypeptides, useful as targets for herbicide discovery, and as probes for genetic and physical mapping of genes of which they are part, or creating transgenic plants, comprises biotin synthase polypeptides and encoding polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            251 AACGACTGGAGCCGGCCCGAGATCCAGGCCGTCTACGACTCACCGCTCCTCGACCTCCTC 310

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  610
                                                                                                                                                                                                                                The invention relates to a novel isolated polynucleotide encoding a first polypeptide or a third polypeptide where the first or third polypeptide is a biotin synthase. The methods and compositions of the invention may be useful in plant molecular biology and breading, particularly in the production of altered levels of biotin synthase in plants and seeds. The polypeptides may be used as a target to facilitate the design and/or identification of inhibitors of these enzymes that may be useful as herbicides. Furthermore, the polypucleotides may be used as probes for genetically and physically mapping the genes of which they are a part. The current sequence is that of the corn biotin synthase-related CDNA of

bbes for genetic and physical mapping of genes of which they are, part,
creating transgenic plants, comprises biotin synthase polypeptides and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides the protein and coding sequences of biotin synthase enzymes from barley, wheat, maize, soybean and the prickly poppy. These sequences can be used to produce transgenic plants which express different levels of the gene, or express it at different times in plant development. They can also be used as a target in the production of herbicides. The present sequence is a barley biotin synthase CDNA obtained from clone behi.pk0005.d10, which was derived from a barley
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      202 AACACCTGGACCAAAGAAATTAAAGCTATATATGACACACCACCACGACTTGATG 261
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              273 TICCACGGGGCTCAAGTCCATAGGAATGTCCATAAATTTAGAGAAGTGCAACAATGCACA 332

RESULT 14
```

```
The invention relates to a novel isolated polynucleotide encoding a first polypeptide or a third polypeptide where the first or third polypeptide is a biotin synthase. The methods and compositions of the invention may be useful in plant molecular biology and breeding, particularly in the production of altered levels of biotin synthase in plants and seeds. The polypeptides may be used as a target to facilitate the design and/or identification of inhibitors of these enzymes that may be useful as herbicides. Furthermore, the polynucleotides may be used as probes for genetically and physically mapping the genes of which they are a part. The current sequence is that of the barley biotin synthase-related cDNA
                                                                                                                                                                                                                                                                                                                 New isolated polynuclectide encoding plant biotin synthase, useful in plant molecular biology and plant breeding purposes, particularly in production of altered levels of biotin synthase in plants and seeds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB 10; Length 1396;

The present invention provides the protein and coding sequences of biotin synthase enzymes from barley, wheat, maize, soybean and the prickly poppy. These sequences can be used to produce transgenic plants which express different levels of the gene, or express it at different times in plant development. They can also be used as a target in the production of herbicides. The present sequence is a maize biotin synthase cDNA obtained from clone cca.pk0012.g11:fis
probes for genetic and physical mapping of genes of which they are part, or creating transgenic plants, comprises biotin synthase polypeptides and encoding polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     982 AGATTGGCTGCAGGAAGATATACAATGAAAGAGGCAGAACAGGTGATGTGCTTCATGGCT 1041

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     OCATION:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1, Application US/09198452A
Sequence 1, Application US/09198452A
Patent No. 6559294
GENERAL INFORMATION:
APPLICANT: Griffais, F
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, preve
TITLE OF INVENTION: and treatment of infection
TITLE OF INVENTION: and treatment of infection
CURRENT APPLICATION WUMBER: US/09/198,452A
CURRENT FILING DATE: 1998-11-24
NUMBER OF SEQ ID NOS: 6849
